Thurs March 1st
at 7 pm**

Martin Piotrowski
of the OU Department of Sociology
will discuss

“A Brief History of Human Population and Demographic Transition.”

Changes in mortality and fertility rates brought about a large-scale population growth in the 19th century and beyond. This presentation considers the predictable changes in the age structure associated with the demographic transition, including the potential for economic growth and the long term increase in the elderly population. The talk concludes by discussing the “second demographic transition” and implications of long-run population process for the world’s demographic future.

You are invited to attend this program which is free, open to the public, and sponsored by the Friends of the Library. Coffee and snacks will be provided.
