Problem....

Did you know...that 65% of all Americans are overweight and 27% are Clinically Obese! This amounts to over 1 BILLION worldwide. And.... 70% of all doctor visits are diet related!!!!

Recently the American Institute for Cancer Research released the following statement:

“We are used to thinking about the obesity epidemic on one hand and the cancer epidemic on the other. We need to think of them as linked.”

Citing a report issued by the Inter. Agency for Research on Cancer it is estimated that being overweight and inactive accounts for ¼ to 1/3 of worldwide cases of breast cancer, colon cancer, endometrial cancer, kidney cancer and esophageal cancer. That’s approx. 102,000 to 135,000 cases in the USA alone!

-Prof. WPT James chairman of International Obesity Task Force
