

It's time to stand up for truth and common sense

No Carbon-Tax

- \$300 a year more on electricity
- \$6000 more for each new house
- \$How much more for petrol, for gas, and for everything that is moved, packaged, cooled, or warmed?

The cost-benefits of abandoning Australia...

It might be ok if there was a good reason, but it won't help the environment a bit. CO₂ is only 0.038% of the atmosphere, man-made CO₂ is only 3% of that, and Australia only makes 1.4% of the global human total, a tiny part of next to nothing. If we shut down Australia we only could possibly prevent 0.015°C of warming and 2 mm of sea rise by 2050. (And that's if we assume the UN committee science is right).

They must be kidding, right?

We want an election first. The tax affects every transaction in the economy. Give the people the choice. Julia Gillard promised a "committee" and no tax. Where was the debate, the discussion, the analysis? If the ALP had promised a carbon tax, would they have won?

Thousands of scientists, including 2 Nobel Prize winners, agree that the threat from CO₂ is being exaggerated. Thousands of volunteers are auditing the science and finding outrageous flaws. It's a grassroots revolt.

Find out more about the costs, how other countries are bailing out, how some scientists used tricks to "hide the decline", why banks want us to trade carbon, then there's the mysterious adjustments, and did you hear, the global temperature set was lost?
