

Build powerful websites fast.

Have a great idea for an online business and need to build a website fast? Want to create a killer website for your organization but don't know where to begin? *Easy PHP Websites with the Zend Framework* shows you how to build websites fast using PHP and MySQL, two of the world's most popular web development technologies. What's more, you'll learn how to turbocharge the development process by taking advantage of the Zend Framework, a powerful tool which helps developers build websites with amazing speed and efficiency.

You'll also learn how to take advantage of popular online services such as the Google Maps API, Google AdWords, the Facebook Platform, and RSS to both expand your audience and create even more compelling websites. To help you earn revenue fast, we'll look at Google's AdSense advertising service, PayPal, and Amazon Web Services.

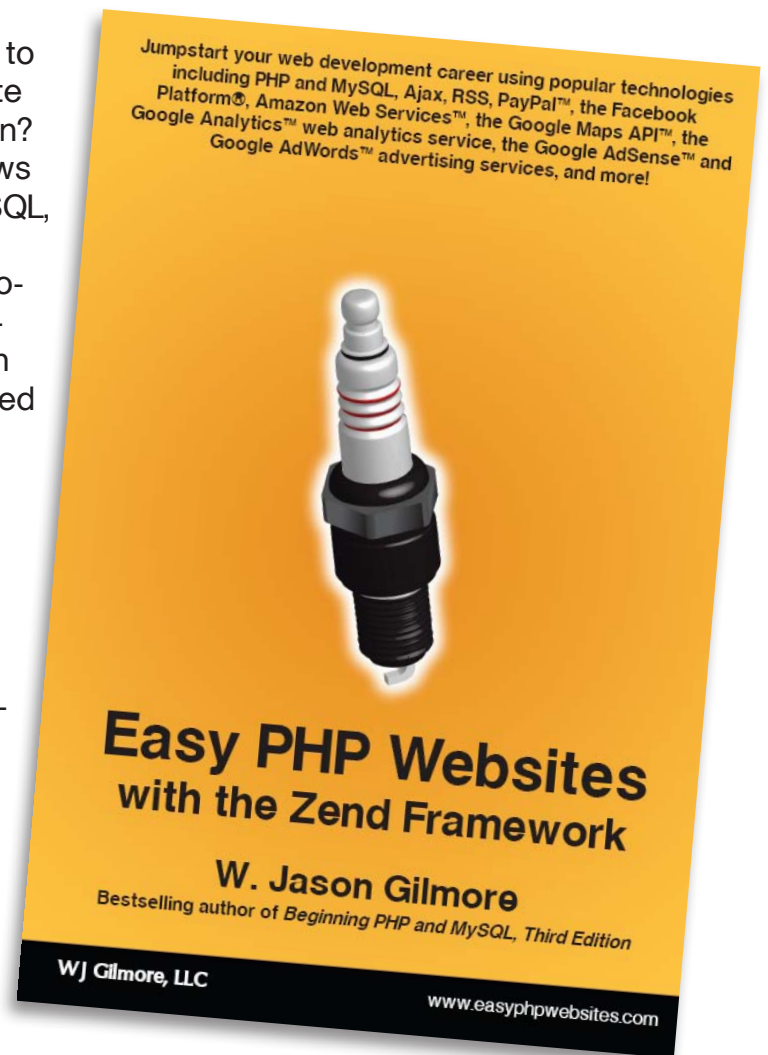

W. Jason Gilmore is founder of W.J. Gilmore, LLC, a publishing and consulting firm based out of Columbus, Ohio. He's the author of several books, including the bestselling *Beginning PHP and MySQL: From Novice to Professional*.

With more than 12 years of experience, Jason has published more than 100 articles within prominent publications such as Developer.com, Linux Magazine, and TechTarget.

Jason is cofounder of CodeMash, a nonprofit organization tasked with hosting an annual namesake developer's conference, and was a member of the 2008 MySQL Conference speaker selection board.
