

Possible talking points...

- This will be AE911Truth/Richard Gage's 100th talk on the destructions of the 3 World Trade Center high rises. It is controversial, in the sense that it explains why the official explanations can't possibly be correct from an architectural and engineering perspective.
- AE911Truth/Richard Gage's talk has evolved over the past two years, incorporating new research findings as they have become known. The most recent is a peer-reviewed research paper by an international team of scientists documenting the discovery of unreacted thermitic material (a high-tech incendiary) in dust samples from the World Trade Center ruins.
- During these 100 talks, AE911Truth/Richard Gage's message has been made before audiences in 10 countries and 19 states.
- AE911Truth/Richard Gage will be speaking to the Commonwealth Club in San Francisco on Sept. 8.
- Before the end of the year, AE911Truth/Richard Gage will add three more countries to the list. One of these, in Japan, expects to an audience in Tokyo of between 500 and 1,000 people.

(Shout out to Dwain Deets. Thanks Dwain!)
